Application: Werkstudent Internationale Fabrikplanung

Dear Sir or Madam,

I am writing to apply for the position “Werkstudent Internationale Fabrikplanung” at ROHDE & SCHWARZ Meßgerätebau GmbH. The combination of technical content and practical work is exactly what I am looking for.

Since March 2026 I have been studying the Master's programme Product Development and Business Studies at Hamm-Lippstadt University of Applied Sciences (expected completion 07/2027), focusing on product development, project management and product and sales management; several modules are taught in English. My Bachelor's degree in Biomedical Engineering (completed November 2025) gave me a technical foundation in electrical engineering, measurement technology, materials science, product testing, digital image and signal processing, artificial intelligence and IT security.

Medical technology, regulatory affairs (ISO 13485, risk management, technical documentation, clinical evaluation, biostatistics), quality assurance and product law were part of my studies. I program in Python and Java, know embedded programming under Linux and cloud computing from my studies, and learn new tools quickly. I am happy to get up to speed quickly with SAP.

The role fits well alongside my Master's studies, which end in July 2027, so I can support you over a longer period; I am happy to agree the working hours with you. German is my native language and my English (B2) is solidified through English-taught modules. I also volunteer with the Ense-Bremen volunteer fire brigade, which has strengthened my teamwork and sense of responsibility.

I would be delighted to introduce myself in a personal interview.

Kind regards

Philipp Humpert
